

# NOVACORE SYSTEMS LTD.

## FY2026 BUSINESS PERFORMANCE & OPERATIONS REPORT

A realistic fictional company document designed for multimodal RAG testing

|                |                     |                  |              |
|----------------|---------------------|------------------|--------------|
| Headquarters   | Singapore           | Employees        | 1,480        |
| 2026 Revenue   | \$132.0M            | Operating Margin | 18.4%        |
| Primary Sector | Industrial AI & IoT | Markets Served   | 42 countries |

**Demo note:** All company names, metrics, people, and events in this report are fictional. The document intentionally mixes text, tables, charts, and embedded images so it can be used to demonstrate multimodal retrieval and question answering.

# 1. Executive Overview

Narrative text section - useful for text retrieval and grounded summarization

NovaCore Systems Ltd. develops industrial AI gateways, computer-vision appliances, and connected sensor hubs for manufacturing, logistics, and energy companies. During FY2026, the company focused on three priorities: expanding enterprise deployments in Europe, improving the gross margin of its flagship AtlasEdge product line, and shortening post-deployment support response times.

FY2026 revenue reached **USD 132.0 million**, up from USD 97.5 million in FY2025. Europe became the fastest-growing region, supported by automotive and warehouse automation projects. The AtlasEdge X1 remained the highest-margin product, while VisionHub Pro generated the largest number of new enterprise pilots. Management approved a further USD 11.5 million investment in the Penang assembly facility for test automation and energy-efficiency upgrades.

The company ended the year with **1,480 employees**. Engineering represented 38% of headcount, operations 27%, sales and customer success 22%, and corporate functions 13%. Customer satisfaction improved as average support resolution time declined steadily through August.

## 2026 Strategic Priorities

| Priority              | 2026 target                      | Year-end status                       |
|-----------------------|----------------------------------|---------------------------------------|
| European expansion    | >25% YoY regional revenue growth | Achieved: 31%                         |
| Support speed         | Average resolution <9 hours      | Achieved in July; 8.1 hours in August |
| Facility utilization  | 80%+ Penang utilization          | Achieved: 82%                         |
| Product profitability | Flagship gross margin >44%       | Achieved: AtlasEdge X1 at 46%         |

Cross-modal clue: the exact electricity mix of the Penang facility appears later in a chart, while the supply-chain control point appears inside an image diagram.

## 2. Financial Performance

Table + line graph

| Metric           | FY2025  | FY2026   | Change   |
|------------------|---------|----------|----------|
| Revenue          | \$97.5M | \$132.0M | +35.4%   |
| Gross profit     | \$39.7M | \$56.4M  | +42.1%   |
| Operating income | \$13.8M | \$24.3M  | +76.1%   |
| Operating margin | 14.2%   | 18.4%    | +4.2 pts |
| R&D investment   | \$12.1M | \$17.9M  | +47.9%   |

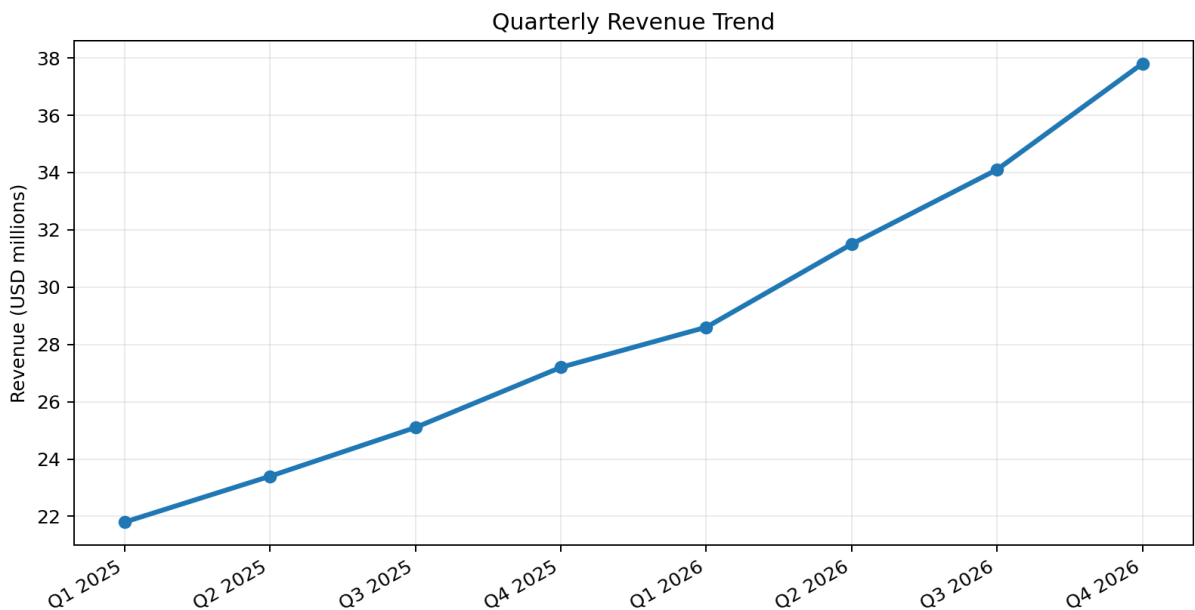

Figure 1. Quarterly revenue increased every quarter across the displayed two-year period. The chart contains the detailed quarter-by-quarter pattern, including the FY2026 peak.

Management attributed the margin expansion mainly to higher AtlasEdge X1 volume, improved component purchasing terms, and better manufacturing yield at the Penang facility. Foreign-exchange movements had a modest negative effect on reported European revenue.

### 3. Regional Operations

Structured table + categorical graph

| Region        | 2026 revenue | YoY growth | Enterprise customers | CSAT  |
|---------------|--------------|------------|----------------------|-------|
| Europe        | \$41.2M      | 31%        | 118                  | 4.7/5 |
| North America | \$38.6M      | 27%        | 104                  | 4.6/5 |
| Asia Pacific  | \$34.9M      | 24%        | 96                   | 4.8/5 |
| Middle East   | \$17.3M      | 18%        | 51                   | 4.5/5 |

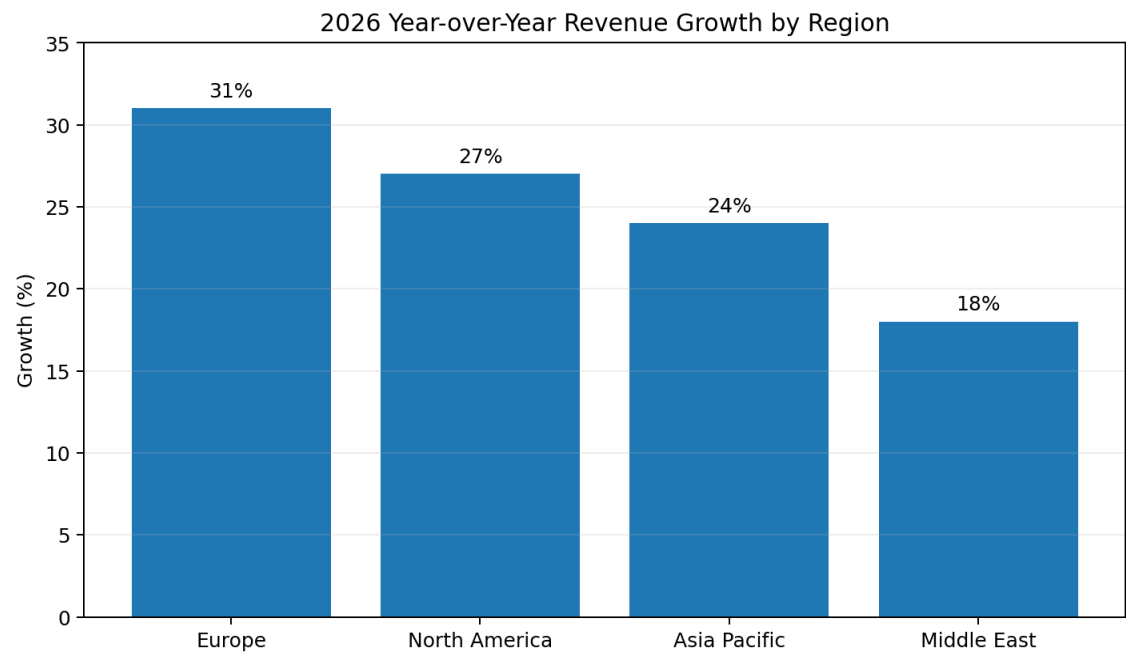

Figure 2. Europe recorded the highest year-over-year regional growth. Asia Pacific, however, finished with the highest customer satisfaction score.

Europe benefited from demand in automotive inspection and warehouse robotics. North American growth was led by energy and cold-chain logistics. Asia Pacific maintained the strongest customer satisfaction result, helped by a dedicated multilingual support team in Singapore.

## 4. Product Portfolio

Embedded product image + product table

### NovaCore Product Portfolio - 2026

Embedded product image used for multimodal retrieval

**AtlasEdge X1**  
AI edge gateway  
46% gross margin

**VisionHub Pro**  
Vision inference node  
41% gross margin

**CoreSense Mini**  
IoT sensor hub  
37% gross margin

**Note: AtlasEdge X1 is the highest-margin product in the 2026 portfolio.**

| Product        | 2026 units | Average selling price | Gross margin | Primary use case           |
|----------------|------------|-----------------------|--------------|----------------------------|
| AtlasEdge X1   | 18,400     | \$2,850               | 46%          | Industrial edge AI gateway |
| VisionHub Pro  | 9,200      | \$4,600               | 41%          | Computer-vision inference  |
| CoreSense Mini | 31,500     | \$740                 | 37%          | IoT sensing & telemetry    |

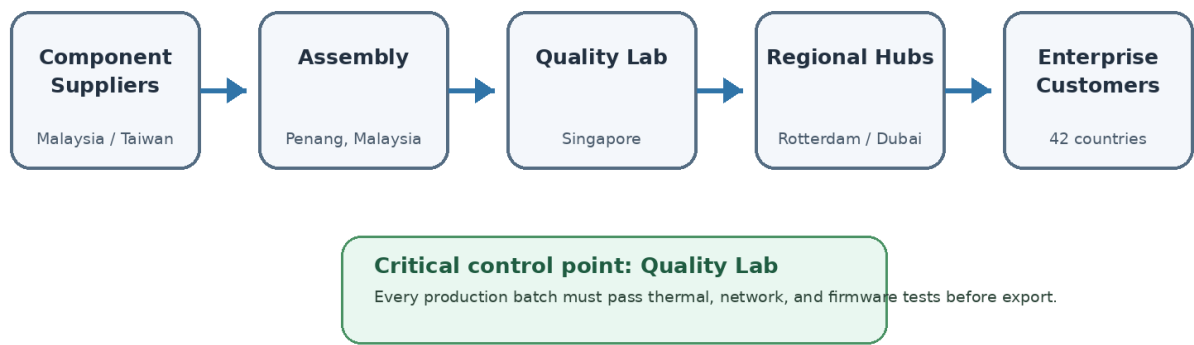

AtlasEdge X1 is the company's highest-margin product, while CoreSense Mini has the highest shipment volume. VisionHub Pro commands the highest average selling price because it includes dedicated vision acceleration hardware.

# 5. Manufacturing & Supply Chain

Information-bearing diagram + facility image

## NovaCore Supply Chain Flow

The diagram is intentionally information-bearing for the multimodal RAG demo.

The supply-chain diagram above contains operational details that are not repeated in full elsewhere. In particular, it identifies the **Quality Lab in Singapore** as the critical control point before products move to regional distribution hubs.

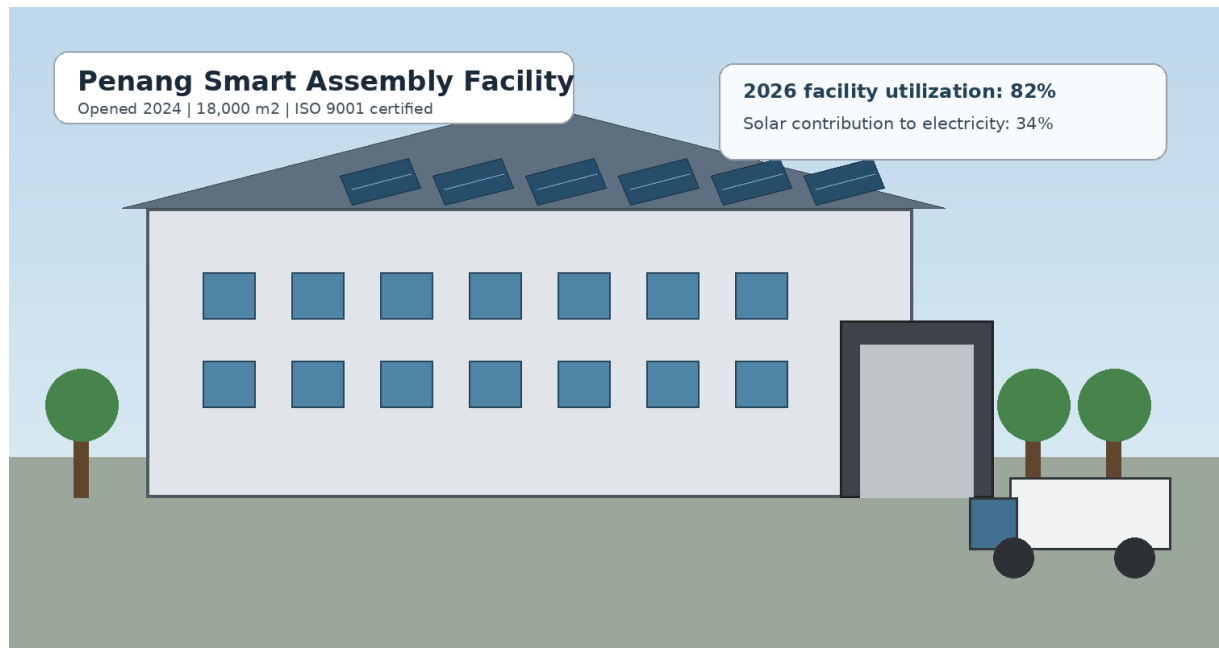

Figure 3. Penang Smart Assembly Facility. The embedded image carries facility utilization and solar contribution values that can be queried by a multimodal system.

## 6. Customer Support & Service Quality

Line graph + SLA table

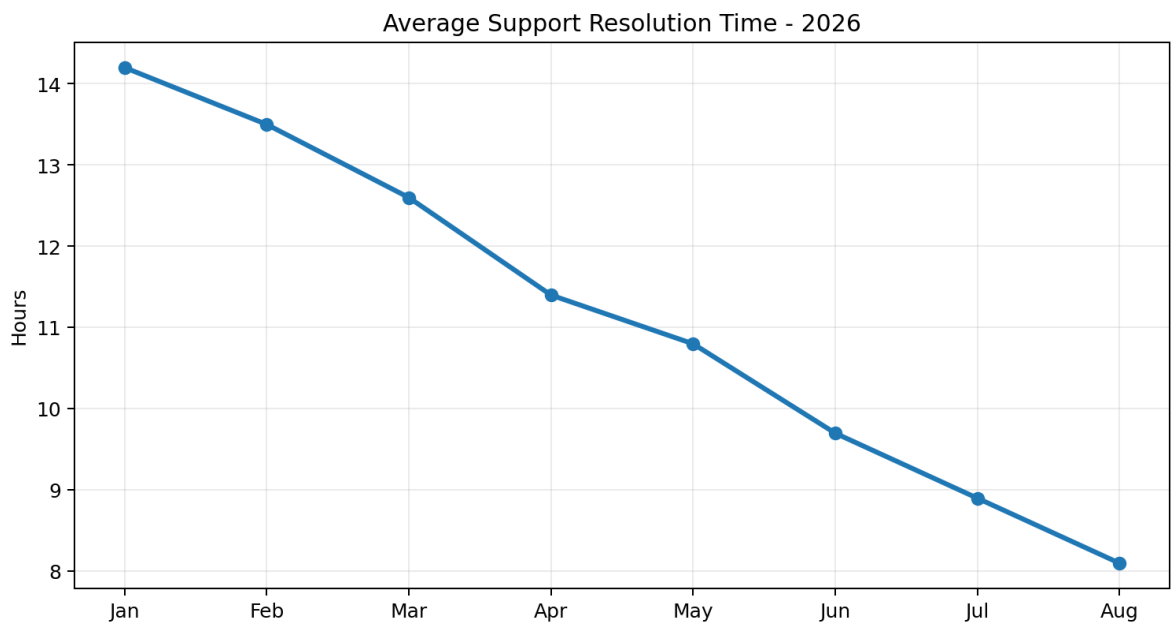

Figure 4. Average support resolution time fell from 14.2 hours in January to 8.1 hours in August.

| Severity      | Response target | Resolution target | 2026 compliance |
|---------------|-----------------|-------------------|-----------------|
| P1 - Critical | 15 min          | 4 hours           | 96.8%           |
| P2 - High     | 1 hour          | 8 hours           | 94.1%           |
| P3 - Standard | 4 hours         | 24 hours          | 97.6%           |
| P4 - Low      | 1 business day  | 3 business days   | 98.9%           |

The support organization introduced automated case classification in March and a retrieval-assisted troubleshooting copilot in May. Human engineers still approve recommended actions for firmware rollback, factory-reset procedures, and security-sensitive changes.

## 7. Sustainability & Facility Efficiency

Pie chart + sustainability metrics table

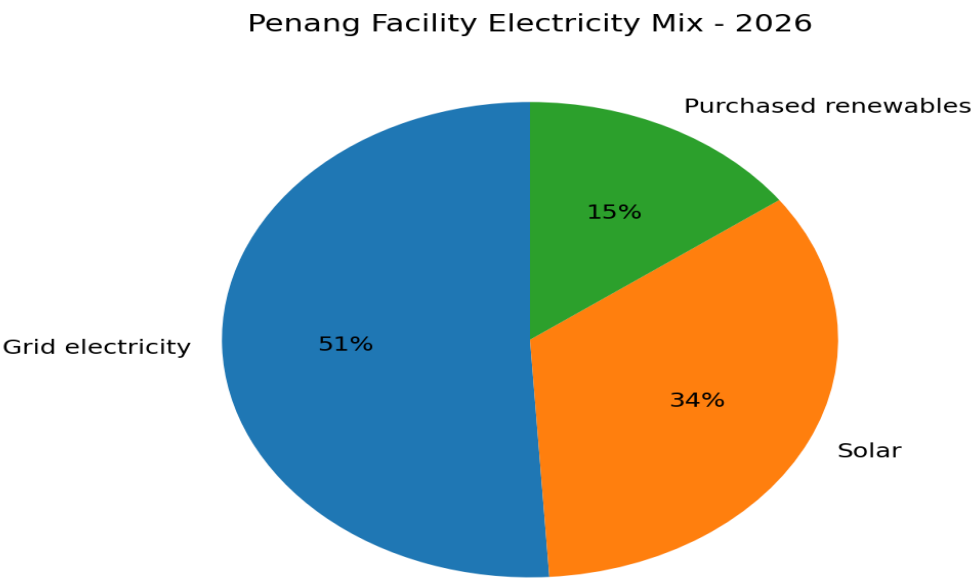

Figure 5. Electricity mix at the Penang facility. Solar supplied 34% of electricity, purchased renewables 15%, and grid electricity 51%.

| Metric                         | 2025         | 2026         | 2027 target  |
|--------------------------------|--------------|--------------|--------------|
| Facility electricity intensity | 118 kWh/unit | 101 kWh/unit | <92 kWh/unit |
| Production scrap rate          | 3.8%         | 2.9%         | <2.5%        |
| Packaging recycled content     | 52%          | 68%          | 80%          |
| Scope 1+2 emissions            | 8,950 tCO2e  | 7,420 tCO2e  | <6,600 tCO2e |

NovaCore plans to add rooftop solar capacity, upgrade burn-in test equipment, and increase recycled packaging content during FY2027. The company also intends to expand supplier carbon-data collection beyond its top 20 component vendors.

## 8. Risk Register & 2027 Outlook

Risk table + concluding narrative

| Risk                              | Likelihood | Impact    | Primary mitigation                                   |
|-----------------------------------|------------|-----------|------------------------------------------------------|
| Semiconductor supply interruption | Medium     | High      | Dual-source critical compute modules                 |
| Vision model export restrictions  | Low-Medium | High      | Maintain multi-vendor accelerator roadmap            |
| Regional currency volatility      | Medium     | Medium    | Natural hedging and selective forwards               |
| Enterprise cybersecurity incident | Low        | Very High | Zero-trust controls, red-team tests, incident drills |
| Support hiring constraints        | Medium     | Medium    | Internal academy + AI-assisted triage                |

For FY2027, NovaCore is targeting revenue between **USD 158 million and USD 166 million**, with an operating margin of 19-20%. Planned investments include the Penang facility expansion, a new European solution-engineering hub, and a second-generation AtlasEdge platform designed for larger multimodal AI workloads.

Management expects Europe to remain the largest regional revenue contributor, while Asia Pacific is expected to remain the fastest market for new customer-logo growth. The board has asked management to preserve cash discipline and avoid overbuilding manufacturing capacity ahead of confirmed enterprise demand.

### Suggested multimodal RAG checks:

- Which product has the highest gross margin, and what does the product image say about it?
- Which region grew fastest, and which region had the highest CSAT?
- What was the support resolution time in August compared with January?
- According to the supply-chain diagram, where is the critical quality-control point?
- What percentage of the Penang facility electricity came from solar?
- Combine the financial table and quarterly graph: what was FY2026 revenue, and which quarter was the peak?
